

You lower it.  
You live with it.

Use an inferior-quality lowering kit and you could turn your best ride into your worst nightmare. Driveline alignment, tracking, handling and ride quality could be severely compromised. Small bumps could send shock waves up your spine. And chassis vibration could become the new soundtrack to your life. But do it right, and the results will astound you.

Authentic Ground Force Lowering Suspension Systems are engineered to enhance ride quality while radically improving handling and performance. The entire system is precision-tuned and load tested to eliminate vibration and harshness, and optimize sporting characteristics. And to keep it simple, our single-part-number box contains everything needed to complete your drop, without cutting or welding.

Any lowering kit can make your truck look good. But after the pictures, you have to live with the choices you make. It's your ride. Lower it right.
